HACKATHON SUBMISSION

# Presentation Guide

Demo script, judging criteria alignment, technical differentiators, and Q&A preparation

Team BugWeisers • Chitragupta Platform

## 🎯 One-Line Pitch

> *"Chitragupta is India's AI-powered legal first-response system — think **'Google Maps for navigating Indian law'** — built with enterprise-grade 5-layer security."*

## 📊 Impact Statistics

| METRIC | VALUE | SOURCE |
|---|---|---|
| Indians who can't afford a lawyer | **80%** | NALSA Report |
| Pending court cases in India | **4.7 Crore** | National Judicial Data Grid |
| Average cost of basic legal advice | **₹5,000 – ₹50,000** | Market estimate |
| Citizens unaware of their rights | **~60%** | CSDS Survey |
| Chitragupta's cost to the user | **₹0 (Free)** | Our platform |

## 🎬 Demo Script (5 Minutes)

1. **Act 1 — The Problem (30 sec)**
   "Meet Ramesh, a daily wage worker in Lucknow. His employer hasn't paid his salary for 3 months. He doesn't know his rights, can't afford a lawyer, and doesn't even know where to start."

2. **Act 2 — The Solution (2 min)**
   Open the live site → Type "My boss hasn't paid my salary for 3 months" → Show AI categorization → Unpaid Salary route → Step-by-step legal roadmap → RTI Generator → Lawyer Matching

3. **Act 3 — Security Architecture (1.5 min)**

Open /admin → Show Command Center → Walk through stat cards → CVSS Scanner (Layer 5) → Immutable Audit Logs (Layer 4) — expand a row to show JSON

4

### Act 4 — Technical Depth (1 min)

"5 security layers: OTP registration → JWT rotation → WAF blocks XSS & SQLi in real-time → Immutable DB audit trail → Automated vulnerability scanning. All containerized with Docker."

## 🏗️ Technical Differentiators

| TYPICAL HACKATHON PROJECT | CHITRAGUPTA ✓ |
|---|---|
| **Single app.js file** | Modular 7-module backend architecture |
| **Plaintext passwords** | bcrypt + TOTP 2FA + hashed backup codes |
| **No auth or basic auth** | JWT rotation (15m + 7d) with revocation |
| **No security headers** | Helmet + WAF + HPP + CORS + CSP |
| **console.log debugging** | Winston structured logging + immutable DB audit |
| **No rate limiting** | IP + user rate limiting via Redis |
| **Manual deployment** | Docker Compose + Vercel auto-deploy |
| **No admin panel** | Glassmorphic Security Command Center |
| **English only** | Hindi + English bilingual |
| **No emergency features** | One-tap helplines (15100, 112, 181) |

## 📋 Judging Criteria Alignment

| CRITERIA | RATING | EVIDENCE |
|---|---|---|
| Innovation & Creativity | ★★★★★ | First AI legal triage for Indian law; Bilingual NLP; Emergency Mode |
| Technical Complexity | ★★★★★ | 5-layer security; 8-table schema; Real-time push notifications |
| Real-World Impact | ★★★★★ | Article 39A compliance; Free for citizens; Tier 2/3 focused |
| UI/UX Design | ★★★★★ | Glassmorphism; Dark mode; Mobile-first; Micro-animations |
| Completeness | ★★★★★ | Full-stack + Live Deployed + Docker + Docs |

## 🗣️ Prepared Q&A

**Q: How does the AI categorization work?**

NLP keyword analysis classifying into 6+ categories. Each maps to curated legal roadmaps with IPC sections. Production version would use a fine-tuned LLM on Indian legal corpus.

### Q: Why not just use ChatGPT?

ChatGPT hallucinates IPC sections. We provide curated, verified guidance plus RTI generation, lawyer matching, encrypted chat, emergency mode, and 5-layer security.

### Q: How do you handle data privacy?

5 layers of security. Encrypted at rest + in transit. Immutable append-only audit logs with REVOKE UPDATE/DELETE. Admin 2FA. Document access triggers push notification to owner.

### Q: What's the scalability path?

Vercel edge (auto-scales). Docker Compose → Kubernetes. Redis distributed rate limiting. PostgreSQL → managed RDS.

## 📎 Quick Links for Judges
